NEW PATIENT EXAM - 08/14/2024 (page 1 of 2)

Subjective

37 y/o F presents with intermittent low back pain for several months, worse with prolonged sitting at work and after lifting boxes of supplies at the dental office 2 weeks ago. Pain 5/10, aching, across the lower lumbar region, L > R. No radiation into the legs. No numbness or tingling. No trauma. No prior care for this.

Objective

Lumbar flexion 50 degrees with pain at end range, extension 20 degrees with pain. Kemp's test positive left for local pain. SLR negative bilaterally. Hypertonicity of the lumbar paraspinals L4-S1, left greater than right. Segmental restriction L4, L5 and left SI. Neuro intact.
